## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1,7-8,12,15,21,23-26,33-39, and 41-46 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record discloses A diaphragm for a loudspeaker drive unit, the diaphragm comprising a block of rigid plastic foam material having a first, convex, frusto-conical sound-radiating front face and a second, convex, frusto-conical rear face, each said frusto-conical face being formed by a respective frustum comprising a truncation plane and surrounding conical flank, wherein said block is stiffened by being bound about over said first and second faces by a multiplicity of turns of one or more elongate members of flexible material stiffened by a stiffening composition, said flexible material being wound tangentially to said truncation planes so as to leave interstitial spaces between adjacent turns at the outer periphery of said conical flanks, in which spaces said block of rigid plastic foam material is left uncovered by said elongate members.

The prior art of record fails to disclose or fairly suggest in combination wherein one or more of said elongate members comprise tape wound carbon fibers and said stiffening composition comprises an epoxy resin, or wherein said one or more elongate members are disposed in low tension so as to maintain said elongate members taut without pres-stressing the same.

The prior art of record discloses A diaphragm for a loudspeaker drive unit, the diaphragm comprising: a central tubular member, a circular block of rigid foam material

of lozenge-shaped cross-section surrounding said tubular member and secured thereto, said block having a first sound-radiating front face and a second, rear face and having a density between 25 and 35 grams per liter, a winding consisting of between 100 and 500 turns of a flexible monofilaments bundle of paraphenylene polybenzobisoxazole wound tangentially to said tubular member about said block to form a single layer at the periphery of said block leaving spaces between turns, and an adhesive stiffening composition applied to said monofilament bundle.

The prior art fails to disclose or fairly suggest wherein said adhesive stiffening composition secures said winding to said block of foam and secures said block of foam to the central tubular member.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
